

# CANCER IN SOUTH DAKOTA

A preliminary report of cancer among South Dakotans in 2022

**April 2024**

Photo by Travel South Dakota

The South Dakota Cancer Registry is funded with a grant from the Centers for Disease Control and Prevention – grant number DP22-2202.

## Overview

This report offers numbers and rates of newly diagnosed malignant cancer cases among South Dakota residents during 2022. The data in this report is considered preliminary and is current as of February 14<sup>th</sup>, 2024. After the majority of the 2022 cancer cases are reported, the South Dakota Cancer Registry (SDCR) will release the final annual cancer report. The final report will present more complete data on cancer incidence among South Dakotans. The report will be posted at <https://www.getscreenedsd.org/sdcr>. Data on South Dakota cancer deaths for 2022 is also available in the *South Dakota Vital Statistics: State and County Comparison of Leading Health Indicators, 2022*.

On the following pages, Table 1 shows the number of newly diagnosed cases and the age-adjusted incidence rates for all cancers combined, by primary site, and sex for the year 2022. During that year, there has been a total of 3,259 invasive and *in-situ* bladder cancers diagnosed among South Dakota residents. The age-adjusted rate for these cases is 289.8 per 100,000 population.

By primary site, cancers of the female breast, lung, prostate, colorectal (colon and rectum), and bladder accounted for 1,846 diagnoses, more than half (56.6%) of all new malignancies. By sex, female breast cancer was the most frequently diagnosed cancer. It accounted for 34.4% of all new cases among females, followed by lung cancer and colorectal cancer. Among males, cancer of the prostate occurred most frequently, accounting for 25.6% of newly diagnosed malignancies, followed by lung cancer and colorectal cancer.

Table 2 presents the number of cases diagnosed in 2022 by the SEER (Surveillance, Epidemiology, and End Results Program) Summary Stage. This table reflects *in-situ* cases that are not used to calculate incidence rates but are collected by the SDCR. Summary staging categorizes how far a cancer has spread from its point of origin. Summary staging uses all information available in the medical record by using a combination of the most precise clinical and pathological documentation based on the extent of the disease.

This report is available online at <https://www.getscreened.sd.org/sdcr>

**Table 1: Age-Adjusted Incidence Rates by Site and Sex  
South Dakota, 2022 (Preliminary)**

|  | TOTAL |                   | MALE  |                   | FEMALE |                   |
|--|-------|-------------------|-------|-------------------|--------|-------------------|
|  | Cases | Age-Adjusted Rate | Cases | Age-Adjusted Rate | Cases  | Age-Adjusted Rate |
| <b>All Sites</b>                       | 3,259 | 289.8             | 1,602 | 286.7             | 1,657  | 298.6             |
| Bladder                                | 120   | 10.3              | 93    | 17.5              | 27     | 4.4               |
| Kidney and Renal Pelvis                | 94    | 8.8               | 58    | 11.2              | 36     | 6.5               |
| Ureter                                 | 2     | 0.1               | 1     | 0.1               | 1      | 0.1               |
| Other Urinary Organs                   | 4     | 0.4               | 4     | 1.0               | 0      | 0.0               |
